## 1. INTRODUCTION

### 1.1. Document Purpose

This document presents the L4 Functional Requirements Processes for Administrative Cooperation. It includes L4 processes that show the human interaction tasks and the automated tasks and the information exchanges. In addition, there is an annex containing graphic representations of the L4 Business Process Diagrams. This report is generated from ARIS and only contains information present in ARIS.

### 1.2. Deviation From TEMPO

The following TEMPO sections are not part of this document:

- Sign Off list;
- Distribution List;
- Scope;
- Applicable Documents;
- List of Tables;
- List of Figures.

The following TEMPO sections are added to this document:

- Project Ownership;
- Intended Audience.

### 1.3. Assumption and Constraints

The reader should have a basic knowledge of the EU BPM methodology.

### 1.4. Project Ownership

The unit DG TAXUD/C2 is the project owner of this Excise Functional Requirements BPM Report.

### 1.5. Intended Audience

The purpose of this document is to establish a common understanding between readers that are familiar with the applicable documents and may belong to the following categories:

- Any person responsible for the Excise - EMCS business / system processes, requirements, functional specifications or conformance testing;
- Any person responsible for the Export - AES business / system processes, requirements, functional specifications or conformance testing;
- Any person of the development team of DG TAXUD/C5 who will use this document as a reference during the development cycle;
- Any person from the DG TAXUD units who has to verify whether the current document is consistent with the applicable documents and depicts the solution to be followed;
- Any Member State (MS) or Trade representatives who have to identify the actions, implications and consequences on their national domain, including both business people and people having an IT background.

### 1.6. Structure of Document

This document is organised as follows:

- Introduction;
- References, containing a list of acronyms and abbreviations and the documents referenced in this functional requirements document;

- Document History, listing the different versions and submission dates of this functional requirements document;
- High Level System Overview, providing an overview of the system and the actors involved in this functional requirements document;
- Process Models, visualising in separate sections information from all L4 BPMs relating to the system covered in this functional requirements document.

In separate document, the following related annex may be found:

- Annex 1: Model Graphics, providing all L4 BPM models

## 4. HIGH LEVEL SYSTEM OVERVIEW

### 4.1. System Overview

This document contains the functional specifications for the Excise Movement and Control System to which any Nationally Developed Excise Application (NDEA) and Centrally Developed Excise Application (CDEA) needs to conform. These functional specifications are to be regarded as the basis for the development of the technical specifications (i.e. DDNEA – 'Design Document for National Excise Applications'). It is important to note that the complete functional specifications can be found in ARIS and that this document is envisaged to be supporting documentation to the diagrams and information in ARIS. If the legal baseline of this document would change, the functional specifications will need to be updated and aligned.

Since the actual implementation of the system is under national responsibility, the division between user interface and automated tasks included in this document should be considered as a proposal from DG TAXUD. MSAs are free to deviate and introduce more or less automation. However, as with all Trans-European Systems, compliance with the common domain information exchanges will be mandatory to ensure automated communication between MSAs.

### 4.2. Actors

ACTORS	DESCRIPTION
MSA of Dispatch	The excise office that validates and stores all information submitted by the Consignor, in particular all successive states of the e-AD/e-SAD, before sending this information to the MSA Destination application. It monitors the outgoing traffic, e.g. the goods leaving the tax warehouse.
MSA of Dispatch	The excise office that validates and stores all information submitted by the Consignor, in particular all successive states of the e-SAAD, before sending this information to the MSA Destination application. It monitors the outgoing traffic, e.g. the goods leaving the tax warehouse.
MSA of Control	MSA of Control: The excise office that validates, stores and disseminates the Control Report to all concerned actors
MSA of Event	<p>The MSA of Event is the competent authority of the Member State on the territory of which an event has occurred. The MSA of Event is responsible for:</p> <ul style="list-style-type: none"> <li>- Assigning a unique reference to the Event Report,</li> <li>- Forwarding Event Report to all concerned MSAs.</li> </ul> <p>The MSA of Event may check the contents of the Event Report by means of actions outside the system.</p> <p>The MSA of Event can be the MSA of Dispatch, the MSA of Destination/MSA of Export or a third MSA (i.e. an MSA not involved in the movement).</p>
Issuing MSA	The excise office that after discovering information worth communicating to one or several other MSAs, undertakes any

Excise Functional Requirements BPM Report for Administrative Cooperation
HIGH LEVEL SYSTEM OVERVIEW

	required controls and sends a message reporting the found information and/or the results of the actions performed to the concerned MSAs.
EMCS	EMCS (Excise Movement and Control System) is a computerised system for monitoring movements of excise goods within the EU.
Consignor	<p>The Economic Operator that submits the e-AD/e-SAD and all possible changes, e.g. change of destination, splitting (duty suspension only), cancellation (duty suspension only), etc. to the MSA of Dispatch. The Consignor is the owner of the contents of an e-AD/e-SAD, i.e. he is the only one allowed to change its contents.</p> <p>Note: in these specifications, unless explicitly stated otherwise, the terms "consignor" and "consignee" mean any type of consignor and consignee respectively. For instance, "consignor" may mean authorised warehouse keeper, or registered consignor, or certified consignor or temporary certified consignor. The specific type of operator will be indicated only when a process, rule, condition, etc. requires it (i.e. applies only to one or more specific types of consignors or of consignees).</p>
Excise officer	The Excise Officer performs operational duties that belong to the MSA in EMCS movement.
ELO	The ELO (Excise Liaison Office) manages all exchanges between MS concerning movements and other EMCS-linked information, in particular concerning data involved in SEED, enquiries, administrative cooperation exchanges.
Consignee	<p>The Economic Operator that handles the order of the Duty Paid goods, lodges (optionally) a guarantee with the MSA of Dispatch and pays the excise duty for the goods ordered. He is optionally involved in the endorsement of SAAD Copy 3 and is responsible to provide to the Consignor the credentials required (if any) for the refund of the excise duty that was originally paid by the Consignor to the MSA of Dispatch.</p> <p>Note: in these specifications, unless explicitly stated otherwise, the terms "consignor" and "consignee" mean any type of consignor and consignee respectively. For instance, "consignor" may mean authorised warehouse keeper, or registered consignor, or certified consignor or temporary certified consignor. The specific type of operator will be indicated only when a process, rule, condition, etc. requires it (i.e. applies only to one or more specific types of consignors or of consignees).</p>
MSA of Interruption	<p>The MSA of Interruption is the MSA where the interruption occurred.</p> <p>The MSA of Interruption can be the MSA of Dispatch or the MSA of Destination or a third MSA (i.e. an MSA not involved in the movement that is to be interrupted).</p>

Excise Functional Requirements BPM Report for Administrative Cooperation
HIGH LEVEL SYSTEM OVERVIEW

Control officer	The control officer performs physical/documentary control, evaluates the findings from the control and submits the control report to his MSA application
Initiator MSA	The excise office that initially validated the movement information and is committed to give access to its movement information to other MSAs. It is used in the context of the “General query to retrieve an e-AD/e-SAD” business process.
Excise Authority	
MSA of Submission	MSA of Submission: The excise office that validates and stores all information submitted by the Excise Officer regarding a particular event, and forwards this information to the MSA of Event
Initiator MSA	The excise office that validates and securely stores all information submitted by the Consignor, in particular all successive states of the e-AD/e-SAD, before sending this information to the MSA Destination application. It monitors the outgoing traffic, i.e. the goods leaving the tax warehouse.
Requested MSA	The excise office that after receiving a request is responsible to respond by providing the requested information/results.
MSA Official	Any official of a MSA having a role in EMCS (the appointment of persons, as well as the profile definitions, is left to each MSA), such as the ELO and the Excise Officer.
Consignee	<p>The Economic Operator that reports receipt or refusal of goods, alerts on non-conformity of documents, possibly rejects the e-AD/e-SAD.</p> <p>Note: in these specifications, unless explicitly stated otherwise, the terms "consignor" and "consignee" mean any type of consignor and consignee respectively. For instance, “consignor” may mean authorised warehouse keeper, or registered consignor, or certified consignor or temporary certified consignor. The specific type of operator will be indicated only when a process, rule, condition, etc. requires it (i.e. applies only to one or more specific types of consignors or of consignees).</p>
National (Requestor) MSA	The excise office that forwards the search query for the retrieval of an e-AD/e-SAD to the Initiator MSA. It is used in the context of the “General query to retrieve an e-AD/e-SAD” business process.
Requesting MSA	The excise office that initiates a request.
Addressed MSA	The excise office that receives the information and/or results of the controls performed by the Issuing MSA. It is used in the context of the “Administrative cooperation - spontaneous information” business process.

## 5. PROCESS MODELS

### 5.1. Process L4-ACO-01-00-Administrative Cooperation

#### 5.1.1. Objective of Process

The purpose of this diagram is to present in one diagram the main flow concerning Administrative Cooperation process. This diagram mainly focuses on the successful path. For more details please check the respective L4 BPMN diagrams.

#### 5.1.2. Process Details

PROCESS ATTRIBUTE NAME	PROCESS ATTRIBUTE VALUE
Process ID	L4-ACO-01-00
Full Name	Administrative Cooperation
Assumptions	N/A
Constraints	No constraints.
L3 Reference Models	N/A
Existing Specifications	Design Document for National Excise Applications - v3.12

Table 5.1: Process Details

#### 5.1.3. Tasks and Events

##### Task Administrative Cooperation–Request for assistance (Request)

TASK ATTRIBUTE NAME	TASK ATTRIBUTE VALUE
Task Name	Administrative Cooperation–Request for assistance (Request)

## 5.2. Process L4-ACO-01-01-Administrative Cooperation–Request for assistance (Request)

### 5.2.1. Objective of Process

The purpose of this process is to describe the electronic flow for requesting information, controls or actions on any subject related to given operator(s) or movement(s).

In case of movements under duty suspension or duty paid, the Requesting MSA is legally obliged (see Article 25(1) of Regulation (EU) No 389/2012) to consult the concerned movement information through the use cases (L4-ACO-01-21-Download of an e-AD/e-SAD (Query) (FESS)), (L4-ACO-01-19-General query to retrieve an e-AD/e-SAD (Query)) and (L4-ACO-01-18-Status Synchronisation Mechanism)), prior launching a request via the current model.

Upon any event that draws their attention on a particular movement (in particular risk assessment, but possibly any other information coming from external sources), the ELO of any Member State registers a request for controls, actions and information on any subject related to given operator(s) or movement(s) to its MSA.

After receiving the aforementioned request, the Requesting MSA stores it and builds an Administrative Cooperation Common Request message, explicitly indicating that the Request Type is “Administrative cooperation”. After storing the Administrative Cooperation Common Request the Requesting MSA sets the state of the request to “Open” and sends the aforementioned message to the Requested MSA. Finally the

Requesting MSA initiates the timer TIM\_ACO to expire at the expected deadline for receiving the results, as specified in the request message.

The Requested MSA receives the Administrative Cooperation Common Request indicating a request for information, controls or actions, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively).

Afterwards, the Requested MSA determines whether the Administrative Cooperation Common Request has been found valid or not. In the latter case, a refusal message has already been sent to the Requesting MSA for the receipt of an invalid Administrative Cooperation Common Request (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Administrative Cooperation Common Request.

Otherwise, the Administrative Cooperation Common Request has already been stored (in the context of process “L4-CORE-01-05”). The Requested MSA sets the state of the request to “Open” and its ELO is informed about the request for information, controls or actions received.

The ELO of the Requested MSA analyses the request and estimates whether it is possible or not to give the requested information/results in the time limit indicated in the request message. Depending on the outcome of his analysis the following cases exist:

- a) If the Requested ELO agrees with the requested deadline for results, this agreement is implicit; the continuation of the flow of the concerned request takes place at EMCS through the process “L4-ACO-01-03” where the Results are received and this process ends at this point; or
- b) If the Requested ELO feels the deadline is too short, the requested ELO they may send, within one month following the date of receipt of the request, an intermediate message called answer message, where they give a new deadline and their reasons to delay the results message. (see Article 11(3) of Regulation (EU) No 389/2012). The continuation of the flow of the concerned request takes place at EMCS through the process “L4-ACO-01-08”.
- c) If the Requested ELO does not agree with the contents of the request the continuation of the flow of the concerned request takes place at EMCS through the process “L4-ACO-01-24”.

In case b) mentioned above and as a result of process “L4-ACO-01-08” triggered, the Requested MSA sends an Answer Message to the Requesting MSA. The Requesting MSA after receiving the Answer Message, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CBC-01-03” and “L4-CORE-01-05” respectively).

Afterwards, the Requesting MSA determines whether the Answer Message has been found valid or not. In the latter case, a refusal message has already been sent to the Requested MSA for the receipt of an invalid Answer Message (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Answer Message.

Otherwise, the Answer Message has already been stored (in the context of process “L4-CORE-01-05”). The Requesting MSA updates the state of the request to “Extended” and if the timer TIM\_ACO has already expired (a reminder message has been sent to the Requested MSA through process “L4-ACO-01-02”), first resets the flag that has been raised locally at expiration time and then resets the timer TIM\_ACO to expire at the new deadline given in the Answer Message; his ELO is informed of the Requested ELO’s request for deadline extension.

It might also be the case that the timer TIM\_ACO expires at the Requesting MSA without having received a History Results message or an Answer Message for extending the deadline from the Requested MSA. Alternatively, an Answer Message for extending the deadline had been received from the Requested MSA but the timer TIM\_ACO that was reset following the reception of the Answer Message, expires without having received a History Results message. In this case the process “L4-ACO-01-02” is triggered for the submission of the respective reminder message.

After receiving an Answer Message for extending the deadline or after sending a Reminder message, the Requesting MSA expects to receive either a new Answer message or the Results.

### 5.3. Process L4-ACO-01-02-Administrative cooperation-Deadline for results

#### 5.3.1. Objective of Process

The purpose of this process is to describe the electronic flow for the handling of the case that the Requesting MSA has not received the results to an Administrative Cooperation Request within the predefined time-limit. The process is triggered when the timer TIM\_ACO expires without having received a Results message or an Answer Message for extending the deadline from the Requested MSA. Alternatively, an Answer Message for extending the deadline had been received from the Requested MSA but the timer TIM\_ACO that was reset following the reception of the Answer Message expires without having received a Results message. Therefore the Requesting MSA builds a Reminder Message for Administrative Cooperation, stores it and after updating the state of the request to “Late” sends the Reminder Message for Administrative Cooperation to the Requested MSA.

The Requested MSA receives the Reminder Message for Administrative Cooperation, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively).

Afterwards, the Requested MSA determines whether the Reminder Message for Administrative Cooperation has been found valid or not. In the latter case, a refusal message has already been sent to the Requesting MSA for the receipt of an invalid Reminder Message for Administrative Cooperation (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Reminder Message for Administrative Cooperation.

Otherwise, the Reminder Message for Administrative Cooperation has already been stored (in the context of process “L4-CORE-01-05”). The Requested MSA updates the state of the request to “Late” and its ELO is

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

informed of the reminder for the request for information, controls or actions. The process ends at this point with the receipt of the reminder message by the Requested MSA. The Requested ELO is expected to send a Results message or extend the deadline by sending an Answer message.

Table 5.78: Event Reminder for Submission of Results has been Received

## 5.4. Process L4-ACO-01-03-Administrative Cooperation–Request for assistance (Results)

### 5.4.1. Objective of Process

The purpose of this process is to describe the electronic flow for the submission of the results to an Administrative Cooperation Request.

Upon receipt of the request message, the ELO of the requested MSA is committed to undertake the requested actions and controls and give back results by the requested deadline. and no later than three months following the date of receipt of the request (see Article 11(1) of Regulation (EU) No 389/2012). Where the requested MSA is already in possession of that information, the ELO of the requested MSA ought to provide the results within one month following the date of receipt of the request (see Article 11(1) of Regulation (EU) No 389/2012). In certain special categories of cases, different time limits may be agreed between the requested MSA and the requesting MSA (see Article 11(2) of Regulation (EU) No 389/2012).

Via this results message, the requested ELO may request the requesting ELO to provide feedback on the follow-up action taken by the requesting MSA, on the basis of the provided results (see Articles 8(5), 15(2) and 16(2) of Regulation (EU) 389/2012, Articles 8, 15 and 16). In case such feedback is requested, the requesting ELO shall send back their feedback as soon as possible via another results message.

The process is triggered when the ELO of the Requested MSA completes the requested actions specified in the request message sent by the Requesting MSA. Alternatively, a reminder message for the submission of the results has been received by the Requested ELO, as a result of the process “L4-ACO-01-02”.

More specifically, the Requested ELO prepares the results on the basis of the checks and investigations he has carried out and registers it to the Requested MSA. After receiving the results for the request for information, controls or actions, the Requested MSA stores them and builds an Administrative Cooperation Results message. The Requested MSA stores the Administrative Cooperation Results.

a) If the Requested MSA wishes to receive feedback on the results provided to the Requesting MSA, it updates the state of the request to "Answered and feedback expected".

b) If the Requested MSA do not wish to receive feedback on the results to be provided, it updates the state of the request to “Closed”.

The process continuous as the Requesting MSA sends the the Administrative Cooperation Results to the Requesting MSA.

The Requesting MSA receives the Administrative Cooperation Results, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively).

Afterwards, the Requesting MSA determines whether the Administrative Cooperation Results has been found valid or not. In the latter case, a refusal message has already been sent to the Requested MSA for the receipt of an invalid Administrative Cooperation Results (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Administrative Cooperation Results.

Otherwise, the Administrative Cooperation Results has already been stored (in the context of process “L4-CORE-01-05”).

Via this results message, the requested ELO may request the requesting ELO to provide feedback on the follow-up action taken by the requesting MSA, on the basis of the provided results (see Articles 8(5), 15(2) and 16(2) of Regulation (EU) 389/2012, Articles 8, 15 and 16). In case such feedback is requested, the requesting ELO shall send back their feedback as soon as possible via another results message.

a) If the Results message indicates that feedback is expected on the results provided, then the Requesting MSA updates the state of the request to "Answered and feedback expected. The process continuous in through "L4-ACO-01-26".

b) If the results message do not indicate that feedback is expected, The Requesting MSA updates the state of the request to “Closed”. At this point, if the timer TIM\_ACO has already expired (and therefore a reminder message has been sent to the Requested MSA through process “L4-ACO-01-02”) the Requesting MSA resets the flag that has been raised locally at expiration time; otherwise it stops the timer TIM\_ACO. The ELO of the Requesting MSA is informed about the results received for his request for information, controls or actions and the process ends at this point.

Table 5.105: Event Results for Request for Information, Controls or Actions have been Received

## 5.5. Process L4-ACO-01-04-Administrative Cooperation-Spontaneous Information

### 5.5.1. Objective of Process

The purpose of this process is to describe the electronic flow for providing one-way information between two MSAs.

Submission of an administrative cooperation results message is mandatory and shall be sent to the addressed Member States within seven days of the control (as defined in Article 10 of Implementing Regulation (EU) 2016/323), where one of the cases referred to in points (a) to (d) of Article 15(1) of Regulation (EU) No 389/2012 is detected, as a result of a documentary or physical control of goods, at the premises of a registered consignee, of a temporary registered consignee or of an authorised warehouse keeper.

Upon any event among which the outcome of risk assessment, the ELO of an Issuing MSA may discover information and find it relevant to perform a series of controls and/or actions on a particular subject (in particular, but not exclusively, an e-AD) in order to send his findings to the ELO of one or several Addressed MSAs.

Therefore the ELO of the Issuing MSA registers his findings to the Issuing MSA, attaching if relevant, supporting document(s). After receiving the aforementioned findings, the Issuing MSA stores them and builds an Administrative Cooperation Results message (taking into consideration the information/results registered by its ELO) which is stored locally and finally sent to the Addressed MSA.

The Addressed MSA receives the Administrative Cooperation Results, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively).

Afterwards, the Addressed MSA determines whether the Administrative Cooperation Results message has been found valid or not.

In the latter case, a refusal message has already been sent to the Issuing MSA for the receipt of an invalid Administrative Cooperation Results message (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Administrative Cooperation Results.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

In the former case, the Administrative Cooperation Results has already been stored by the Addressed MSA (in the context of process “L4-CORE-01-05”) and the ELO of the Addressed MSA is informed about the information found and/or the results of the controls performed.

This process ends at this point and the ELO of the Addressed MSA is informed on anomalies, discrepancies or offences that might impact his Member State. Therefore he is free:

- to order further controls; and/or
- to communicate the information to the relevant persons; or
- to keep the information for later use; or
- to simply ignore the information if he judges it irrelevant for him.

No further actions are expected by the Addressed MSA in terms of information exchange messages.

## 5.6. Process L4-ACO-01-08-Handle Deadline Extension

### 5.6.1. Objective of Process

The purpose of this process is to describe the electronic flow for the extension of the deadline set for the submission of the required results to a request.

The process is triggered when the ELO of the Requested MSA decides to register a request for extending the time limit for giving the requested information to the Requested MSA, either after receiving an Administrative Cooperation Common Request or after receiving a Reminder for the submission of the Results.

The Requested MSA receives the aforementioned deadline extension request, stores it and prepares an Answer Message. In the case of a request for history information no History Refusal Reason Code shall be included in the Answer Message. After storing the Answer Message it updates the state of the request to “Extended”.

## 5.7. Process L4-ACO-01-09-Interruption of a Movement

### 5.7.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for interrupting a movement of excise goods under duty suspension arrangement (inside the territory of the European Union), in accordance with the current Common Specifications (FESS and DDNEA).

Submission of the interruption message (including the reference of the event or control report) is mandatory where one of the cases, referred to in points (a) to (e) of Article 15(1) of Regulation (EU) No 389/2012, is detected and shall be sent to the previously nominated MSA of destination and to the MSA of dispatch., within one day of the moment when the MSA of interruption becomes aware of the definitive interruption (as defined in Article 12 of Implementing Regulation (EU) 2016/323).

The process is triggered when an Excise officer in the MSA of Interruption decides to interrupt a movement. (This is in particular the case where an event report signals that the totality of goods was lost, stolen or destroyed, or where a control ascertains a severe offence.)

For this purpose, the Excise Officer registers the interruption for a certain movement to its MSA (MSA of Interruption). After receiving the aforementioned interruption, the EMCS at MSA of Interruption stores it and then checks if the MSA of Interruption (i.e. the current MSA) is involved in the specific movement (i.e. as MSA of Dispatch or as MSA of Destination/ MSA of Export).

In case the MSA of Interruption is involved in the movement (i.e. the MSA of Interruption is either the MSA of Dispatch or the MSA of Destination/ MSA of Export of this movement), the process continues.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

In case the MSA of Interruption is not involved in the specific movement (i.e. it is neither the MSA of Dispatch nor the MSA of Destination/ MSA of Export of this movement), it proceed with performing a Download of an e-AD and/or a General query to retrieve an e-AD, in order to consult the latest information for the specific movement.

If the MSA of Interruption performs a Download of an e-AD (i.e. by using the “L4-ACO-01-28-Perform Download of an e-AD (Query-Results)” sub-process), depending on the outcome (end event) of the ““L4-ACO-01-28-Perform Download of an e-AD (Query-Results)” sub-process (for a detailed description of the respective process please refer to L4-ACO-01-28-Perform Download of an e-AD (Query-Results))”, the following may happen:

a. In case:

- a refusal message (IE917/IE906) is received from the MSA of Dispatch (since the Movement Download Request (IE784) was found invalid at the MSA of Dispatch); or
  - a refusal message (IE917/IE906) is sent to the MSA of Dispatch (since the received Movement Download Answer (IE785) or the History of a Movement (IE838) was found invalid at the MSA of Interruption); or
  - a Movement Download Answer (IE785) (indicating that the e-AD was not available (online) at the MSA of Dispatch) is stored at the MSA of Interruption (since it was found valid at the MSA of Interruption);
- the latest information for the e-AD is not available at the MSA of Interruption and the whole process ends at this point.

b. In case the History of a Movement (IE838) is stored at the MSA of Interruption (since it was found valid at the MSA of Interruption), the latest information of the e-AD is available at the MSA of Interruption and the process continues.

If the MSA of Interruption performs a General query to retrieve an e-AD (i.e. by using the “L4-ACO-01-29-Perform General Query to retrieve an e-AD (Query-Results)” sub-process), depending on the outcome (end event) of the “L4-ACO-01-29-Perform General Query to retrieve an e-AD (Query-Results)” sub-process (for a detailed description of the respective process please refer to “L4-ACO-01-29-Perform General Query to retrieve an e-AD (Query-Results))”, the following may happen:

a. In case:

- a refusal message (IE917/IE906) is received from the Initiator MSA of Dispatch (since the Common Request (IE701) was found invalid at the Initiator MSA); or
  - a refusal message (IE917/IE906) is sent to the Initiator MSA (since the received List of e-AD (IE821) or the Refusal of Common Request (IE702) was found invalid at the MSA of Interruption); or
  - a Refusal of Common Request IE702 (indicating that the query returned no results at the Initiator MSA) is stored at the MSA of Interruption (since it was found valid at the MSA of Interruption);
- the latest information for the e-AD is not available at the MSA of Interruption and the whole process ends at this point.

b. In case the List of e-AD (IE821) is stored at the MSA of Interruption (since it was found valid at the MSA of Interruption), the latest information of the e-AD is available at the MSA of Interruption and the process continues.

Following, the EMCS at MSA of Interruption (regardless if it is involved or not in the movement) continues with building the Interruption of Movement (IE807) and then with storing this message. After this, the EMCS at MSA of Interruption changes the e-AD state to “Stopped” and the Excise Officer of the MSA of Interruption is informed about this interruption.

Subsequently, the MSA of Interruption identifies if it is the MSA of Dispatch, the MSA of Destination/ MSA of Export or a third MSA (i.e. an MSA not involved in the current movement).

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

#### 1) MSA of Interruption is the MSA of Dispatch

In case the MSA of Interruption is the MSA of Dispatch, it identifies if the destination of the movement is known.

If the destination of the movement is known, the EMCS at MSA of Interruption notifies the Interruption of Movement to both the Consignor and to the MSA of Destination/ MSA of Export and the process continues.

After receiving the Interruption of Movement (IE807), the EMCS at MSA of Destination/ MSA of Export proceeds with validating the data of the Interruption of Movement, by using the “Perform validation of Interruption of Movement” sub process (for a detailed description of the respective process please refer to “L4-CORE-01-03-Perform validation of Common Domain message”). Following, the EMCS at MSA of Destination/ MSA of Export carries on with the handling of the validation results by using the “Handle validation results of Interruption of Movement” call activity (for a detailed description the respective process please refer to “L4-CORE-01-05-Handle validation Results of Common Domain message”). The outcome (end event) of the “Handle validation results of Interruption of Movement” call activity may be the following:

- a. A refusal message (IE917/IE906) is sent to the MSA of Interruption (since the Interruption of Movement was found invalid); or
- b. The Interruption of Movement is stored in the EMCS at MSA of Destination/ MSA of Export (since the Interruption of Movement was found valid). In this case, the EMCS of MSA of Destination/ MSA of Export changes the e-AD state to “Stopped” and then notifies the Consignee of the Interruption of Movement.

If the destination of the movement is unknown, the EMCS at MSA of Interruption notifies the Interruption of Movement only to the Consignor and the process continues.

Following the dissemination of the Interruption of Movement to the Consignor and to the MSA of Destination/ MSA of Export (in case the destination is known), the MSA of Dispatch handles the timers associated with the specific movement by using the “Handle Timers associated with Interrupted Movement” sub process (for a detailed description of the respective process please refer to “L4-ACO-AS-IS-01-10-Handle Timers associated with an Interrupted Movement”) and the whole process ends at this point.

#### 2) MSA of Interruption is the MSA of Destination/ MSA of Export

In case the MSA of Interruption is the MSA of Destination/ MSA of Export, the EMCS at MSA of Destination/ MSA of Export notifies the Interruption of Movement to the Consignee and to the MSA of Dispatch.

After receiving the Interruption of Movement (IE807), the EMCS at MSA of Dispatch proceeds with validating the data of the Interruption of Movement, by using the “Perform validation of Interruption of Movement” sub process (for a detailed description of the respective process please refer to “L4-CORE-01-03-Perform validation of Common Domain message”). Following, the EMCS at MSA of Dispatch carries on with the handling of the validation results by using the “Handle validation results of Interruption of Movement” call activity (for a detailed description the respective process please refer to “L4-CORE-01-05-Handle validation Results of Common Domain message”). The outcome (end event) of the “Handle validation results of Interruption of Movement” call activity may be the following:

- a. A refusal message (IE917/IE906) is sent to the MSA of Interruption (since the Interruption of Movement was found invalid) and the whole process ends here; or
- b. The Interruption of Movement is stored in the EMCS of MSA of Dispatch (since the Interruption of Movement was found valid). In this case, the EMCS of MSA of Dispatch changes the e-AD state to

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

“Stopped” and then notifies the Consignor of the Interruption of Movement. In addition, the EMCS at MSA of Dispatch handles the timers associated with the specific movement by using the “Handle Timers associated with Interrupted Movement” sub process (for a detailed description of the respective process please refer to “L4-ACO-01-10-Handle Timers associated with an Interrupted Movement”) and the whole process ends at this point.

### 3) MSA of Interruption is a third MSA

In case the MSA of Interruption is a third MSA (i.e. it is neither the MSA of Dispatch nor the MSA of Destination of the movement), it identifies if the destination of the movement is known.

If the destination of the movement is known, the EMSC at MSA of Interruption notifies the Interruption of Movement to both the MSA of Dispatch and to the MSA of Destination/ MSA of Export. If the destination of the movement is unknown, the EMSC at MSA of Interruption notifies the Interruption of Movement only to the MSA of Dispatch.

After receiving the Interruption of Movement (IE807), the EMCS at MSA of Dispatch proceeds with validating the data of the Interruption of Movement, by using the “Perform validation of Interruption of Movement” sub process (for a detailed description of the respective process please refer to “L4-CORE-01-03-Perform validation of Common Domain message”). Following, the EMCS at MSA of Dispatch carries on with the handling of the validation results by using the “Handle validation results of Interruption of Movement” call activity (for a detailed description the respective process please refer to “L4-CORE-01-05-Handle validation Results of Common Domain message”). The outcome (end event) of the “Handle validation results of Interruption of Movement” call activity may be the following:

- a. A refusal message (IE917/IE906) is sent to the MSA of Interruption (since the Interruption of Movement was found invalid). If the destination of the movement is unknown, the whole process ends here. Otherwise (i.e. when the destination is known) the process continues; or
- b. The Interruption of Movement is stored in the EMCS of MSA of Dispatch (since the Interruption of Movement was found valid). In this case, the EMCS of MSA of Dispatch changes the e-AD state to “Stopped” and then notifies the Consignor of the Interruption of Movement. In addition, the EMCS at MSA of Dispatch handles the timers associated with the specific movement by using the “Handle Timers associated with Interrupted Movement” sub process (for a detailed description of the respective process please refer to “L4-ACO-01-10-Handle Timers associated with an Interrupted Movement”). If the destination of the movement is unknown, the whole process ends here. Otherwise (i.e. when the destination is known) the process continues.

After receiving the Interruption of Movement (IE807), the EMCS at MSA of Destination/ MSA of Export proceeds with validating the data of the Interruption of Movement, by using the “Perform validation of Interruption of Movement” sub process (for a detailed description of the respective process please refer to “L4-CORE-01-03-Perform validation of Common Domain message”). Following, the EMCS at MSA of Destination/ MSA of Export carries on with the handling of the validation results by using the “Handle validation results of Interruption of Movement” call activity (for a detailed description the respective process please refer to “L4-CORE-01-05-Handle validation Results of Common Domain message”). The outcome (end event) of the “Handle validation results of Interruption of Movement” call activity may be the following:

- a. A refusal message (IE917/IE906) is sent to the MSA of Interruption (since the Interruption of Movement was found invalid) and the whole process ends here; or
- b. The Interruption of Movement is stored in the EMCS at MSA of Destination/ MSA of Export (since the Interruption of Movement was found valid). In this case, the EMCS of MSA of Destination/ MSA of Export

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

changes the e-AD state to “Stopped”. Then the EMCS at MSA of Destination/ MSA of Export notifies the Consignee of the Interruption of Movement and the whole process ends at this point.

## 5.8. Process L4-ACO-01-11-Movement Verification–Request (Request)

### 5.8.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for requesting information, controls or actions on any subject related to given operator(s) or movement(s) (i.e. duty paid B2C movements and/or any undocumented movements), in accordance with the current Common Specifications (FESS and DDNEA).

Upon receipt of the request message, the ELO of the requested MSA is committed to undertake the requested actions and controls and give back results by the requested deadline and no later than three months following the date of receipt of the request (see Article 11(1) of Regulation (EU) No 389/2012). Where the requested MSA is already in possession of that information, the ELO of the requested MSA ought to provide the results within one month following the date of receipt of the request (see Article 11(1) of Regulation (EU) No 389/2012). In certain special categories of cases, different time limits may be agreed between the requested MSA and the requesting MSA (see Article 11(2) of Regulation (EU) No 389/2012).

Upon any event that draws their attention on a particular movement (in particular risk assessment, but possibly any other information coming from external sources), the ELO of any Member State registers a request for controls, actions and information on any subject related to given operator(s) or movement(s) (i.e. duty paid B2C movements and/or any undocumented movements) to its MSA (i.e. Requesting MSA).

After receiving the aforementioned request, the Requesting MSA stores it and builds a Movement Verification Request message (IE722). After storing the Movement Verification Request message, the Requesting MSA sets the state of the request to “Open” and sends the aforementioned message to the Requested MSA. Finally, the Requesting MSA initiates the timer TIM\_MVS to expire at the expected deadline for receiving the results, as specified in the request message.

The Requested MSA receives the Movement Verification Request message (IE722) indicating a request for information, controls or actions, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03-Perform validation of Common Domain message” and “L4-CORE-01-05-Handle validation Results of Common Domain message” respectively).

In case the Movement Verification Request message has been found invalid at the Requested MSA, a refusal message (IE917/IE906) has already been sent to the Requesting MSA, for the receipt of an invalid Movement Verification Request message (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”). The process ends at this point without storing the Movement Verification Request.

Otherwise, the Movement Verification Request has already been stored (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”). The Requested MSA sets the state of the request to “Open” and its ELO is informed about the request for information, controls or actions received.

The ELO of the Requested MSA analyses the request and estimates whether it is possible or not to give the requested information/results in the time limit indicated in the request message. Depending on the outcome of his analysis the following cases exist:

- a) If the Requested ELO agrees with the requested deadline for results, this agreement is implicit; the continuation of the flow of the concerned request takes place at EMCS through the process “L4-ACO-01-13-Movement Verification-Request (Results)” (where the Movement Verification Results (IE725) are received) and this process ends at this point; or
- b) If the ELO of the requested MSA feels the deadline is too short, they may send, within one month following the date of receipt of the request, an intermediate message called answer message, where they give a new deadline and their reasons to delay the results message. (see Article 11(3) of Regulation (EU) No 389/2012). The continuation of the flow of the concerned request takes place at EMCS through the process “L4-ACO-01-14-Handle Deadline Extension- Movement Verification”.
- c) If the Requested ELO does not agree with the contents of the request the continuation of the flow of the concerned request takes place at EMCS through the process “L4-ACO-01-23-Handle Refusal Response-Movement Verification”.

In case of b) mentioned above and as a result of process “L4-ACO-01-14-Handle Deadline Extension-Movement Verification” triggered, the Requested MSA sends a Movement Verification Answer (IE723) to the Requesting MSA.

The Requesting MSA, after receiving the Movement Verification Answer (IE723), performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03-Perform validation of Common Domain message” and “L4-CORE-01-05-Handle validation Results of Common Domain message” respectively).

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

In case the Movement Verification Answer has been found invalid at the Requesting MSA, a refusal message (IE917/IE906) has already been sent to the Requested MSA for the receipt of an invalid Movement Verification Answer (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”) and the process ends at this point without storing the Movement Verification Answer.

Otherwise, the Movement Verification Answer has already been stored (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”) and the Requesting MSA updates the state of the request to “Extended”. Then, if the timer TIM\_MVS has already expired (a Reminder Message for Movement Verification Request (IE724) has already been sent to the Requested MSA through process “L4-ACO-01-12-Movement Verification-Reminder”), the Requesting MSA first resets the flag that has been raised locally at expiration time and then resets the timer TIM\_MVS to expire at the new deadline given in the Movement Verification Answer. The ELO at the Requesting MSA is informed of the Requested ELO’s request for deadline extension.

It might also be the case that the timer TIM\_MVS expires at the Requesting MSA without having received a Movement Verification Results message (IE725) or a Movement Verification Answer (IE723) for extending the deadline from the Requested MSA. Alternatively, a Movement Verification Answer for extending the deadline had been received from the Requested MSA, but the timer TIM\_MVS (that was reset following the reception of the Movement Verification Answer) expires, without having received a Movement Verification Results message. In this case, the process “L4-ACO-01-12-Movement Verification-Reminder” is triggered, for the submission of the respective Reminder Message for Movement Verification Request (IE724).

After receiving a Movement Verification Answer for extending the deadline or after sending a Reminder Message for Movement Verification Request, the Requesting MSA expects to receive either a new Movement Verification Answer or the Movement Verification Results.

## 5.9. Process L4-ACO-01-12-Movement Verification-Reminder

### 5.9.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for the handling of the case that the Requesting MSA has not received the results to a Movement Verification Request (IE722) within the pre-defined time limit, in accordance with the current Common Specifications (FESS and DDNEA).

The current process is triggered when the timer TIM\_MVS expires. After the TIM\_MVS expiration, the Requesting MSA builds a Reminder Message for Movement Verification Request (IE724), stores it and after updating the state of the request to “Late”, it sends the Reminder Message for Movement Verification Request to the Requested MSA.

The Requested MSA receives the Reminder Message for Movement Verification Request (IE724), performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03-Perform validation of Common Domain message” and “L4-CORE-01-05-Handle validation Results of Common Domain message” respectively).

In case the Reminder Message for Movement Verification Request has been found invalid at the Requested MSA, a refusal message (IE917/IE906) has already been sent to the Requesting MSA, for the receipt of an invalid Reminder Message for Movement Verification Request (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”) and the process ends at this point, without storing the Reminder Message For Movement Verification Request.

Otherwise, the Reminder Message for Movement Verification Request has already been stored (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”) and the Requested MSA updates the state of the request to “Late”. Finally, the ELO of the Requested MSA is informed of the reminder for the request for information, controls or actions and the whole process ends here.

Table 5.231: Event Reminder for Submission of Results has been Received

## 5.10. Process L4-ACO-01-13-Movement Verification-Request (Results)

### 5.10.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for the submission of the results to a Movement Verification Request, in accordance with the current Common Specifications (FESS and DDNEA).

Upon receipt of the request message, the ELO of the requested MSA is committed to undertake the requested actions and controls and give back results by the requested deadline and no later than three months following the date of receipt of the request (see Article 11(1) of Regulation (EU) No 389/2012). Where the requested MSA is already in possession of that information, the ELO of the requested MSA ought to provide the results within one month following the date of receipt of the request (see Article 11(1) of Regulation (EU) No 389/2012). In certain special categories of cases, different time limits may be agreed between the requested MSA and the requesting MSA (see Article 11(2) of Regulation (EU) No 389/2012).

The process is triggered when the ELO of the Requested MSA completes the requested actions specified in the Movement Verification Request (IE722) sent by the Requesting MSA. More specifically, the Requested ELO prepares the results on the basis of the checks and investigations he/she has carried out and registers it

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

to the Requested MSA. After receiving the results for the request for information, controls or actions, the Requested MSA stores them and builds a Movement Verification Results message (IE725). Afterwards, the Requested MSA stores the Movement Verification Results message and after updating the state of the request to “Closed”, sends the Movement Verification Results message to the Requesting MSA.

The Requesting MSA receives the Movement Verification Results message (IE725), performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03-Perform validation of Common Domain message” and “L4-CORE-01-05-Handle validation Results of Common Domain message” respectively).

Via this results message, the requested ELO may request the requesting ELO to provide feedback on the follow-up action taken by the requesting MSA, on the basis of the provided results (see Articles 8(5), 15(2) and 16(2) of Regulation (EU) 389/2012, Articles 8, 15 and 16). In case such feedback is requested, the requesting ELO shall send back their feedback as soon as possible via another results message (in the context of process “L4-ACO-01-27-Movement Verification–Provide Feedback”)

In case the Movement Verification Results message has been found invalid at the Requesting MSA, a refusal message (IE917/IE906) has already been sent to the Requested MSA for the receipt of an invalid Movement Verification Results message (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”) and the process ends at this point, without storing the Movement Verification Results.

Otherwise, the Movement Verification Results message has already been stored (in the context of process “L4-CORE-01-05-Handle validation Results of Common Domain message”). The Requesting MSA updates the state of the request to “Closed”. At this point, if the timer TIM\_MVS has already expired (and therefore a Reminder Message for Movement Verification Request (IE724) has been sent to the Requested MSA through process “L4-ACO-01-12-Movement Verification-Reminder”), the Requesting MSA resets the flag that has been raised locally at expiration time; otherwise it stops the timer TIM\_MVS. The ELO of the Requesting MSA is informed about the results received for his/her request for information, controls or actions and the process ends at this point.

## 5.11. Process L4-ACO-01-14-Handle Deadline Extension- Movement Verification

### 5.11.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for the extension of the deadline set for the submission of the required results to a Movement Verification Request, in accordance with the current Common Specifications (FESS and DDNEA).

The process is triggered when the ELO of the Requested MSA decides to register a request for extending the time limit for giving the requested information to the Requested MSA.

The Requested MSA receives the aforementioned deadline extension request, stores it and prepares a Movement Verification Answer (IE723). After storing the Movement Verification Answer, the Requested MSA updates the state of the request to “Extended”.

## 5.12. Process L4-ACO-01-15-Submission of an Event Report (Submit)

### 5.12.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic submission of an event report during excise movements (including exporting movements), namely, movements under duty suspension, duty paid – Business to Business (duty paid B2B) movements, duty paid – distance selling (duty paid B2C) movements or undocumented movements (i.e. movements using a non-European Union standard document) in accordance with the current Common Specifications (FESS and DDNEA).

Submission of an event report is recommended mandatory where one of the cases, referred to in points (a) to (e) of Article 15(1) of Regulation (EU) No 389/2012, is detected and shall be sent as soon as it has potential consequences on the results of the movement, in particular significant shortages., within seven days of the moment when the competent authority becomes aware of the event (as defined in Article 14 of Implementing Regulation (EU) 2016/323). After examination, the MSA of submission considers whether an event is worth entering into investigation procedures and/or that complementary controls must be achieved. After

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

examination, the MSA of submission considers whether an event is worth entering into investigation procedures and/or that complementary controls must be achieved.

The process focuses on the activities performed by the MSA of the Excise office receiving and submitting (MSA of Submission) the event report to the MSA of Event. Based on the foreseen scenarios described in the current Common Specifications, the MSA of Submission, can be the MSA of Dispatch, the MSA of Destination/MSA of Export, or a third MSA.

The start event is triggered by the receipt of information by an excise officer concerning an incident that has occurred during an excise movement. The EMCS automatically records all the information provided builds and records/stores the Event Report message (IE840).

Then the EMCS of the MSA of Submission identifies if the MSA of Submission is also the MSA of Event.

In case the MSA of Submission is also the MSA of Event the transmission of event report (IE840:C\_EVT\_DAT) is deemed immediately done and the process ends at this point (The Event Report is stored at the MSA of Submission which is also the MSA of Event).

In case the MSA of Submission is not the MSA of Event, then the MSA of Submission transmits the (IE840) Event Report to the MSA of Event. The EMCS at the MSA of Event proceeds with validating the Event Report (IE840) data, by using the “Perform validation of event report” sub process. Then, the EMCS at MSA of Event proceeds with the handling of the validation results by using the “Handle validation results of event report” call activity. Depending on the outcome (end event) of the “Handle validation results of event report” call activity, the following may happen:

- If the Event Report is a found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the MSA of Submission (since the event report was found invalid) and the whole process ends at this point.
- If the event report is found valid the event report (IE840) is recorded at the EMCS of MSA of Event and the whole process ends at this point.

### 5.12.2. Process Details

## 5.13. Process L4-ACO-01-16-Submission of an Event Report (Handling)

### 5.13.1. Objective of Process

The purpose of this process is to describe all possible paths concerning the handling of a submitted Event Report in accordance with the current Common Specifications (FESS and DDNEA). The process focuses on the activities performed by the MSA of validating the Event Report submitted by the MSA of Submission and then disseminating the validated report to all concerned actors of the movement (MSA of Dispatch, MSA of Destination/MSA of Export/MSA of Export, Consignor and Consignee).

The process can be triggered upon two conditions:

- When the Event Report is received from MSA of Submission and recorded successfully at MSA of Event.
- When the Event Report exists in MSA of Event (MSA of Event is also MSA of Submission)

In both cases the EMCS of the MSA of Event assigns a unique reference to the Event Report and the process continues.

Then the EMCS of MSA of Event updates the Event Report type to: "Validated document". The EMCS of the MSA of Event identifies whether the MSA of Event (current MSA) is also the MSA of Submission:

- In case the MSA of Event is also the MSA of Submission then the EMCS sends an acknowledgment of the validated Event Report to the Excise Officer.
- Otherwise the process continues.

The EMCS at MSA of Event identifies whether the MSA of Event is the MSA of Dispatch and thus has the latest e-AD information or the latest information for the Duty paid movement (B2B, B2C or undocumented) in order to disseminate the validated Event Report. Otherwise the MSA of Event is a third MSA (including the case it is a former MSA of Destination/MSA of Export) or the MSA of Destination/MSA of Export and has to obtain the latest information of e-AD/e-SAD:

In case the MSA of Event is the MSA of Dispatch (hence the latest e-AD or Duty paid movement (B2B, B2C or undocumented) information is available), the process continues.

In case of Duty paid B2C or undocumented movement the information should be available to the MSA of Event (including the case it is a third MSA) or the MSA of Destination/MSA of Export) in order for the process to continue.

In case the latest e-AD information is not available (MSA of Event is a third MSA (including the case it is a former MSA of Destination/MSA of Export) or the MSA of Destination/MSA of Export) then it proceeds with performing a Download of an e-AD in order to obtain the latest information concerning the specific movement:

The MSA of Event performs a Download of an e-AD/e-SAD by using the "L4-ACO-01-28-Perform Download of an e-AD/e-SAD (Query-Results)" sub-process:

a. In case:

- A refusal message (IE917/IE906) is received from the MSA of Dispatch (since the Movement Download Request (IE784) had been found invalid at the MSA of Dispatch); or
- A refusal message (IE917/IE906) is sent to MSA of Dispatch (since the received Movement Download Answer (IE785) or History of a Movement (IE838) had been found invalid at the MSA of Event); or
- A Movement Download Response IE785 (indicating that the e-AD/e-SAD was not available (online) at the MSA of Dispatch) is stored (since it had been found valid at the MSA of Event);

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

the latest information for the e-AD/e-SAD is not available at the MSA of Event and the whole process ends at this point.

b. In case the History of a Movement (IE838) is stored (since it had been found valid), the latest information of the e-AD/e-SAD is available at the MSA of Event and the process continues.

At this point the MSA of Event (either this is the MSA of Dispatch, MSA of Destination/Export, or a third MSA or a former MSA of Destination/MSA of Export) has the latest e-AD information and can proceed to Event Report dissemination.

1. In case the MSA of Event is the MSA of Dispatch:

o If the destination of the movement is known the MSA of Dispatch notifies the Consignor and the MSA of Destination/MSA of Export of the validated Event Report. Then, the EMCS of the MSA of Destination/MSA of Export proceeds with the validation of the Event Report data, by using the “Perform validation of Event Report” sub process. Then, the EMCS at MSA of Destination/MSA of Export proceeds with the handling of the validation results by using the “Handle validation results of Event Report” call activity. Depending on the outcome (end event) of the “Handle validation results of Event Report” call activity, the following may happen:

a. If the Event Report was found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the MSA of Dispatch and the whole process ends at this point;

b. If the Event Report is found valid the Event Report is recorded at the EMCS of MSA of Destination/MSA of Export. Then the EMCS of the MSA of Destination identifies whether the MSA of Destination (current MSA) is also the MSA of Submission.

- In case the MSA of Destination is also the MSA of Submission, the EMCS sends an acknowledgment of the validated Event Report to the Excise Officer.

- Otherwise the process continues.

Then the EMCS identifies if the destination of the movement is for Export.

- If the destination of the movement is for Export the process ends at this point with the Event Report acknowledged by the Excise Officer.

- If the destination of the movement is not for Export then the EMCS transfers the Event Report (IE840:C\_EVT\_DAT) to Consignee. The process ends at this point with the Event Report acknowledged by the Excise Officer and sent to Consignee.

Upon completion of dissemination of the validated Event Report to MSA of Destination/MSA of Export and to Consignor the whole process ends at this point.

o If the destination of the movement is not known then the MSA of Dispatch notifies the Consignor of the validated Event Report. Upon completion of dissemination of the validated Event Report to Consignor the whole process ends at this point.

2. In case the MSA of Event is the MSA of Destination/MSA of Export, the EMCS of the MSA of Destination/MSA of Export notifies the Consignee and the MSA of Dispatch of the validated Event Report. Then, the EMCS at MSA of Dispatch proceeds with the validation of the Event Report data, by using the “Perform validation of Event Report” sub process. Then the EMCS of the MSA of Dispatch, proceeds with the handling of the validation results by using the “Handle validation results of Event Report” call activity. Depending on the outcome (end event) of the “Handle validation results of Event Report” call activity, the following may happen:

a. If the Event Report was found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the MSA of Destination/MSA of Export and the whole process ends at this point;

b. If the Event Report is found valid the Event Report is recorded at the EMCS of MSA of Dispatch. The EMCS of the MSA of Dispatch identifies whether the MSA of Dispatch is also the MSA of Submission:

- In case the MSA of Dispatch is also the MSA of Submission then the EMCS sends an acknowledgment of the validated Event Report to the Excise Officer.

- Otherwise the process continues

Then, The EMCS at the MSA of Dispatch transmits the Event Report (IE840:C\_EVT\_DAT) to Consignor.

Upon completion of dissemination of the validated Event Report to MSA of Dispatch and to Consignor the whole process ends at this point.

3. In case the MSA of Event is a third MSA:

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

o If the Destination of the movement is known, the EMCS of the third MSA notifies in parallel the MSA of Dispatch and the MSA of Destination/MSA of Export of the validated Event Report. Then the process continues as follows:

The EMCS at MSA of Dispatch proceeds with the validation of the Event Report data, by using the “Perform validation of Event Report” sub process. Then the EMCS of the MSA of Dispatch, proceeds with the handling of the validation results by using the “Handle validation results of Event Report” call activity. Depending on the outcome (end event) of the “Handle validation results of Event Report” call activity, the following may happen:

a. If the Event Report was found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the third MSA and the whole process ends at this point;

b. If the Event Report is found valid the Event Report is recorded at the EMCS of MSA of Dispatch.

The EMCS of the MSA of Dispatch identifies whether the MSA of Dispatch is also the MSA of Submission:

- In case the MSA of Dispatch is also the MSA of Submission then the EMCS sends an acknowledgment of the validated Event Report to the Excise Officer.

- Otherwise the process continues

Then, The EMCS at the MSA of Dispatch transmits the Event Report (IE840:C\_EVT\_DAT) to Consignor.

The EMCS of the MSA of Destination/MSA of Export proceeds with the validation of the Event Report data, by using the “Perform validation of Event Report” sub process. Then, the EMCS at MSA of Destination/MSA of Export proceeds with the handling of the validation results by using the “Handle validation results of Event Report” call activity. Depending on the outcome (end event) of the “Handle validation results of Event Report” call activity, the following may happen:

a. If the Event Report was found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the third MSA and the whole process ends at this point;

b. If the Event Report is found valid the Event Report is recorded at the EMCS of MSA of Destination/MSA of Export.

The EMCS identifies whether the MSA of Destination/MSA of Export is also the MSA of Submission:

- In case the MSA of Destination/MSA of Export is also the MSA of Submission then the EMCS sends an acknowledgment of the validated Event Report to the Excise Officer.

- Otherwise the process continues

Then the EMCS identifies if the destination of the movement is for Export. If this is the case then the process ends at this point with the Event Report acknowledged by the Excise Officer.

- If the destination of the movement is for Export the process ends at this point with the Event Report acknowledged by the Excise Officer.

- If the destination of the movement is not for Export then the EMCS transfers the Event Report (IE840:C\_EVT\_DAT) to Consignee. The process ends at this point with the Event Report acknowledged by the Excise Officer and sent to Consignee.

Upon completion of dissemination of the validated Event Report to MSA of Dispatch, MSA of Destination/MSA of Export, Consignor and Consignee the whole process ends at this point.

o If the destination of the movement is not known the EMCS of the third MSA notifies the MSA of Dispatch.

The EMCS at MSA of Dispatch proceeds with the validation of the Event Report data, by using the “Perform validation of Event Report” sub process. Then the EMCS of the MSA of Dispatch, proceeds with the handling of the validation results by using the “Handle validation results of Event Report” call activity. Depending on the outcome (end event) of the “Handle validation results of Event Report” call activity, the following may happen:

a. If the Event Report was found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the third MSA (since the Event Report was found invalid) and the whole process ends at this point;

b. If the Event Report is found valid the Event Report is recorded at the EMCS of MSA of Dispatch.

The EMCS of the MSA of Dispatch identifies whether the MSA of Dispatch is also the MSA of Submission:

- In case the MSA of Dispatch is also the MSA of Submission then the EMCS sends an acknowledgment of the validated Event Report to the Excise Officer.

- Otherwise the process continues

Then, The EMCS at the MSA of Dispatch transmits the Event Report (IE840:C\_EVT\_DAT) to Consignor.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

Upon completion of dissemination of the validated Event Report to MSA of Dispatch and to Consignor the whole process ends at this point.

The final result of the whole process should be the successful dissemination of the validated Event Report (IE840) to the concerned actors (both MSAs and economic operators).

### 5.13.2. Process Details

PROCESS ATTRIBUTE NAME	PROCESS ATTRIBUTE VALUE
Process ID	L4-ACO-01-16
Full Name	Submission of an Event Report (Handling)
Assumptions	<p>1. The Common Domain validations performed at the receiving side (through the “Perform validation of Event Report” sub-process) are described only in DDNEA (i.e. they are not described in FESS)</p> <p>2. The MSA provides a confirmation for the Event Report to the Excise Officer only when it is the MSA of Submission, in alignment with DDNEA</p>
Constraints	No constraints.

## 5.14. Process L4-ACO-01-17-Control and Submission of Control Report

### 5.14.1. Objective of Process

The purpose of this process is to describe all possible paths concerning the handling of a submitted Control Report in accordance with the current Common Specifications (FESS and DDNEA). The process focuses on the activities performed by the MSA where the Control Report is submitted (MSA of Control) and disseminated to all concerned actors of the movement (MSA of Dispatch and MSA of Destination/MSA of Export).

Submission of a control report is mandatory and shall be sent to the Member States concerned within seven days of the control (as defined in Article 11 of Implementing Regulation (EU) 2016/323), where one of the cases referred to in points (a) to (e) of Article 15(1) of Regulation (EU) No 389/2012 is detected, as a result of a documentary or physical control of goods during a movement.

The process can be triggered either:

- On the basis of a documentary or a physical control of a movement under duty suspension or concerning an identified duty paid B2B movement, duty paid B2C movement or an undocumented movement (i.e. a movement using a non-European Union standard document), a control officer decides to submit a control report.
- On the basis of complementary investigations after the submission of a control report, a control officer decides to submit a complementary Control Report.

The EMCS automatically records all the information provided, builds and records/stores the Control Report message (IE717).

The EMCS of the MSA of Control identifies whether this is the first submission of the Control Report:

- In case the Control Report type is: “Initial submission”, then the EMCS of the MSA of Control assigns a unique reference to the Control Report and the process continues.
- In case the Control Report type is: “Complementary submission” then the process continues.

The EMCS of MSA of Control updates the Control Report message type to: “Validated document”.

Then the EMCS of the MSA of Control identifies whether the MSA of Control is the MSA of Dispatch (as in this case it obtains the latest e-AD/e-SAD information). In any other case (is a third MSA (including the case it is a former MSA of Destination/MSA of Export) or the MSA of Destination/MSA of Export and has to obtain the latest information of e-AD/e-SAD:

- In case the MSA of Control is the MSA of Dispatch the process continues.
- In case of Duty paid B2C or undocumented movement the information should be available to the MSA of Event (including the case it is a third MSA) or the MSA of Destination/MSA of Export) in order for the process to continue.
- In case the MSA of Control is either a third MSA (including the case it is a former MSA of Destination/MSA of Export) or the MSA of Destination/MSA of Export, the MSA of Control performs a Download of an e-AD/e-SAD by using the "L4-ACO-01-28-Perform Download of an e-AD/e-SAD (Query-Results)" sub-process the following may happen:

a. In case:

- A refusal message (IE917/IE906) is received from the MSA of Dispatch (since the Movement Download Request (IE784) Request had been found invalid at the MSA of Dispatch); or
- A refusal message (IE917/IE906) is sent to MSA of Dispatch (since the received Movement Download Answer (IE785) or History of a Movement (IE838) had been found invalid at the MSA of Control); or
- A Movement Download Answer IE785 (indicating that the e-AD/e-SAD was not available (online) at the MSA of Dispatch) is stored (since it had been found valid at the MSA of Control);

the latest information for the e-AD/e-SAD is not available at the MSA of Control and the whole process ends at this point.

b. In case the History of a Movement (IE838) is stored (since it had been found valid), the latest information of the e-AD/e-SAD is available at the MSA of Control and the process continues.

Upon obtaining the latest information of the e-AD/e-SAD, depending on whether the MSA of Control is the MSA of Destination/MSA of Export or a third MSA:

1. In case the MSA of Control is the MSA of Destination/MSA of Export:

The EMCS of the MSA of Destination/MSA of Export notifies the MSA of Dispatch of the Control Report (IE717: C\_CCR\_DAT, Control Report Message Type: Validated document). Then the EMCS of the MSA of Dispatch, proceeds with the validation of the Control Report message, by using the “Perform validation of Control Report” sub process and proceeds with the handling of the validation results by using the “Handle validation results of Control Report” call activity. Depending on the outcome of the “Handle validation results of Control Report” call activity, the following may happen:

- a. If the Control Report is found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the MSA of Destination/MSA of Export and the whole process ends at this point;
- b. If the Control Report is found valid the Control Report is recorded and stored at the EMCS of MSA of Dispatch.

2. In case the MSA of Control is a third MSA:

In case the destination of the movement is known then, the EMCS of the third MSA notifies in parallel the MSA of Dispatch and the MSA of Destination/MSA of Export of the Control Report. The process continues as follows:

The EMCS at MSA of Dispatch proceeds with the validation of the Control Report data, by using the “Perform validation of Control Report” sub process. Then the EMCS of the MSA of Dispatch, proceeds with the handling of the validation results by using the “Handle validation results of Control Report” call activity. Depending on the outcome (end control) of the “Handle validation results of Control Report” call activity, the following may happen:

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

- a. If the Control Report is found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the third MSA (since the Control Report was found invalid) and the whole process ends at this point;
- b. If the Control Report is found valid the Control Report is recorded and stored at the EMCS of MSA of Dispatch.

The EMCS of the MSA of Destination/MSA of Export proceeds with the validation of the Control Report data, by using the “Perform validation of Control Report” sub process. Then, the EMCS at MSA of Destination/MSA of Export proceeds with the handling of the validation results by using the “Handle validation results of Control Report” call activity. Depending on the outcome (end control) of the “Handle validation results of Control Report” call activity, the following may happen:

- a. If the Control Report is found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the third MSA and the whole process ends at this point;
- b. If the Control Report is found valid the Control Report is recorded at the EMCS of MSA of Destination/MSA of Export. Then the EMCS of the MSA of Destination/MSA of Export identifies if a control at arrival of goods is indicated by examining if the “Control at Arrival Required” flag is “true”:
  - In case the “Control at Arrival Required” flag is “true” then a Control is requested by MSA of Control to MSA of Destination/MSA of Export at arrival of goods. The process ends at this point.
  - Otherwise the Control Report is stored at the MSA of Destination/MSA of Export. The process ends at this point.

In case the destination of the movement is not known to the EMCS of the third MSA, the EMCS of the third MSA notifies in the MSA of Dispatch of the Control Report. The process continues as follows:

The EMCS at MSA of Dispatch proceeds with the validation of the Control Report data, by using the “Perform validation of Control Report” sub process. Then the EMCS of the MSA of Dispatch, proceeds with the handling of the validation results by using the “Handle validation results of Control Report” call activity. Depending on the outcome (end control) of the “Handle validation results of Control Report” call activity, the following may happen:

- a. If the Control Report is found invalid, a refusal message (IE917/IE906) is sent to the Excise office of the third MSA and the whole process ends at this point;
- b. If the Control Report is found valid the Control Report is recorded and stored at the EMCS of MSA of Dispatch and the whole process ends at this point.

### 3. In case the MSA of Control is the MSA of Dispatch:

In case the destination of the movement is known then the MSA of Dispatch notifies the MSA of Destination/MSA of Export/Export of the Control Report (IE717: C\_CCR\_DAT, Control Report Message Type: Validated document). The EMCS of the MSA of Destination/MSA of Export proceeds with the validation of the Control Report data, by using the “Perform validation of Control Report” sub process. Then, the EMCS at MSA of Destination/MSA of Export proceeds with the handling of the validation results by using the “Handle validation results of Control Report” call activity. Depending on the outcome (end control) of the “Handle validation results of Control Report” call activity, the following may happen:

- a. If the Control Report is found invalid a refusal message (IE917/IE906) is sent to the Excise office of the MSA of Dispatch (since the Control Report was found invalid) and the whole process ends at this point;
- b. If the Control Report is found valid the Control Report is recorded at the EMCS of MSA of Destination/MSA of Export. Then the EMCS of the MSA of Destination/MSA of Export identifies if a control at arrival of goods is indicated by examining if the “Control at Arrival Required” flag is “true”:
  - In case the “Control at Arrival Required” flag is “true” then a Control is requested by MSA of Control to MSA of Destination/MSA of Export at arrival of goods. The process ends at this point.
  - Otherwise the Control Report is stored at the MSA of Destination/MSA of Export. The process ends at this point.

In case the destination of the movement is not known then the Control Report cannot be disseminated to MSA of Destination/MSA of Export and the whole process ends at this point.

## 5.15. Process L4-ACO-01-18-Status Synchronisation Mechanism

### 5.15.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of the message exchange protocol for the Status Synchronisation Mechanism, in accordance with the current Common Specifications (FESS).

It has to be noted that the actors ("Requesting MSA", "Requested MSA") participating in this Business Process, are general roles used instead of specific roles such as "MSA of Dispatch" or "MSA of Destination".

Consequently, depending on the Business Case/Scenario, the relevant MSA (Dispatch or Destination) could act either as "Requested MSA" or "Requesting MSA".

This decouples the roles that the applications may have for a given ARC queried by the IE784/IE785 mechanism.

The process is triggered in any of the following Cases/Scenarios:

- a) The Requesting MSA decides to initiate "Manual Status Request/Response" ; or
- b) The Requesting MSA decides to initiate "Manual Status Synchronisation Request"; or
- c) The Automated mechanism triggered at the application of the Requesting MSA.

More specifically the Cases/Scenarios are described below:

- a) In the case the process starts when the Requesting MSA decides to initiate a "Manual Status Request/Response", a "Manual Status Request/Response" is registered by the Requesting MSA. Subsequently, the "Manual Status Request/Response" is recorded by the application.
- b) In the case the process starts when the Requesting MSA decides to initiate a "Manual Status Synchronisation Request", "Manual Status Synchronisation Request" is registered by the Requesting MSA. Subsequently, the "Manual Status Synchronisation Request" is recorded by the application.
- c) In the case of receiving a draft report of receipt for an unknown ARC or upon the expiry of the TIM\_EAD\_ESAD timer after a missed report of receipt, the Automated mechanism is triggered at the application of the Requesting MSA. It shall be noted that the Automated mechanism is also triggered upon the expiry of the TIM\_EAD\_ESAD timer in the case of a Duty Paid B2B movement, in which the Report of Receipt has been sent by the consignee, but due to formalities not being fulfilled at the MS of Destination, the Report of Receipt has not been yet transmitted by the MS of Destination to the MS of Dispatch. In this case, in the Status synchronisation mechanism that shall be activated, the Report of Receipt message will not be regenerated to be sent to the MS of Dispatch (i.e. since no message was sent via the common domain, no message will be regenerated).

In each of the three mentioned above Business Cases/Scenarios, a "Movement Download Request" (IE784) message is built. The "Movement Download Request" (IE784) message considers the input given for each Case/Scenario, as mentioned in the above business flows, and is constructed accordingly.

The "Movement Download Request" (IE784) message is recorded and the Requesting MSA notifies the Requested MSA accordingly.

The "Movement Download Request" (IE784) message is received by the Requested MSA. Then, the Requested MSA application proceeds with validation and the handling of the validation results by using "Perform validation of Movement Download Request" subprocess and "Handle validation results of Movement Download Request" call-activity. Depending on the outcome (end event) of the "Handle validation results of Movement Download Request" call-activity, the following could happen:

- If a refusal message (IE917/IE906) is sent to the Requesting MSA (since the Movement Download Request (IE784) was found invalid), the whole process ends at this point;
- If the Movement Download Request (IE784) is recorded (since the Movement Download Request (IE784) was found valid), the process continues.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

The Requested MSA Examines the Movement Download Request (IE784) message content (i.e. ARC (known/unknown), ARC state of the Requesting MSA, last business (event) message sent, “Status Request Message type” item). Considering the information deriving from the Movement Download Request (IE784) examination in previous step, the Movement Download Answer (IE785) message is built and recorded by the Requested MSA application. Then the Requested MSA notifies the Requesting MSA of Movement Download Answer (IE785).

The Movement Download Answer (IE785) message is received by the Requested MSA. Then, the Requested MSA application proceeds with validation and the handling of the validation results by using “Perform validation of Movement Download Answer” subprocess and “Handle validation results of Movement Download Answer” call-activity. Depending on the outcome (end event) of the “Handle validation results of Movement Download Answer” call-activity, the following may happen:

- If a refusal message (IE917/IE906) is sent to the Requested MSA (since the Status Request was found invalid), the whole process ends at this point;
- If the Movement Download Answer (IE785) is recorded (since the Status Response was found valid), the process continues.

Then, the Requested MSA considering the content of the Movement Download Request (IE784) examined in previous step identifies whether the “Status Request Message Type” item exists.

- If the item is “Not Applicable”, the process ends after the Movement Download Answer (IE785) is sent to the Requesting MSA. The Requesting MSA has received all the available information from the Requested MSA in the Movement Download Answer (IE785).
- If the item has value “1”, the process continues since this value identifies that the Requesting MSA has requested the last message sent from the Requested MSA in order for the two MSAs to be synchronised.

Furthermore, considering the content of the Movement Download Request (IE784) examined in previous step, requested MSA identifies whether the two MSAs are synchronised or not.

- If the two MSAs are synchronised, no additional message is intended to be sent, considering the examined information of the Movement Download Request (IE784). The process ends at this point and Requesting MSA has received all the available information from the Requested MSA in the Movement Download Answer (IE785).
- If the two MSAs are desynchronised, the missing message (IEZZZ) is regenerated.

In this step, the message, which was built in the context of another Business Process and has been missing (IEZZZ) (i.e. IE801, IE803, IE807, IE810, IE813, IE818, IE819, IE829, IE839, IE905) is regenerated having the same message body but different message header. Afterwards, the regenerated missing message (IEZZZ) is sent to the Requesting MSA and the process ends at this point at the Requested MSA.

The Movement Download Answer (IE785) and the missing message (IEZZZ), have been sent to Requesting MSA since MSAs (Requested and Requesting) were found to be desynchronised.

The Requesting MSA receives the missing message (IEZZZ) and the relevant Business Processes are triggered respectively (i.e. Submit and Register e-AD, Perform report of Receipt/Export, Perform Cancellation of movement, Perform Change of Destination of a movement, Perform Alert or Rejection of an e-AD, Manual Closing of the movement).

If the Requesting MSA receives no message after the Movement Download Answer (IE785) has been recorded, since it is valid, the process continues.

Following, the EMCS at the Requesting MSA identifies whether the request is triggered manually or automatically.

- If it is triggered manually, then the EMCS at the Requesting MSA forwards the Movement Download Answer (IE785) and the missing business message, when applicable, to the MSA official and the whole process ends.
- If it is triggered automatically, then the whole process ends at this point.

### 5.15.3. Tasks and Events

#### Event Requesting MSA decides to initiate "Manual Status Request"

EVENT ATTRIBUTE NAME	EVENT ATTRIBUTE VALUE
Event Name	Requesting MSA decides to initiate "Manual Status Request"
Event Type	Start event
Description	The Excise Officer decided to initiate the Manual Status Request process. This part of the flow starting with the decision of the registration of the Manual Status Request describes the mechanism that could be used at any time by any MSA application to request the status of an e-AD from any MSA application, independent of any preconditions other than the ARC being known or unknown. Several information exchanges of an excise operation (identified by a unique ARC) require a timely response. Due to exceptions, those responses may not arrive in time.

## 5.16. Process L4-ACO-01-19-General query to retrieve an e-AD/e-SAD (Query)

### 5.16.1. Objective of Process

The purpose of this process is to describe the electronic flow for requesting to retrieve an e-AD/e-SAD either inside the national MSA or in a remote MSA, based on a combination of search criteria. It shall be noted that the outcome of such queries may return data related to different types of movements (i.e. duty suspension or duty paid B2B).

The process is triggered when an Official in a MSA decides to retrieve an e-AD/e-SAD. For this reason, the MSA Official builds his query giving the supposed initiator MSA of the searched e-AD/e-SAD(s) and a series of query criteria concerning one or several of the fields describing the movement and registers it to its national MSA (National (Requestor) MSA).

After receiving the aforementioned query for an e-AD/e-SAD, the National (Requestor) MSA stores it, and determines which MSA initiated the e-AD/e-SAD. It might be the case that the Initiator MSA is the National (Requestor) MSA itself. In that case, the same application plays both roles and the National (Requestor) MSA will handle the query itself; thus no request is submitted to another MSA. This process ends at this point and the continuation of the flow of the concerned query takes place at EMCS through the process “L4-ACO-01-20-General query to retrieve an e-AD/e-SAD (Results)”.

Otherwise, the National (Requestor) MSA builds a Common Request message for the specific e-AD/e-SAD, taking into consideration the query criteria defined by the MSA Official and after storing it, sends the Common Request to the Initiator MSA.

The Initiator MSA receives the Common Request, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively).

Afterwards, the Initiator MSA determines whether the Common Request has been found valid or not. In the former case, the Common Request has already been stored by the Initiator MSA (in the context of process “L4-CORE-01-05”) and this process ends at this point. The continuation of the flow of the concerned query takes place at EMCS through the process “L4-ACO-01-20-General query to retrieve an e-AD/e-SAD (Results)”.

Otherwise, a refusal message has already been sent to the National (Requestor) MSA for the receipt of an invalid Common Request (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Common Request.

## 5.17. Process L4-ACO-01-20-General query to retrieve an e-AD/e-SAD (Results)

### 5.17.1. Objective of Process

The purpose of this process is to describe the electronic flow for replying to a query for an e-AD/e-SAD. It shall be noted that the outcome of such queries may return data related to different types of movements (i.e. duty suspension or duty paid B2B).

The process is triggered due to the receipt of a query for an e-AD/e-SAD by the National (Requestor) MSA, as detailed in process “L4-ACO-01-19-General query to retrieve an e-AD/e-SAD (Query)”.

In the case that it has been identified that the National (Requestor) MSA is the same with the Initiator MSA, i.e. no request has been sent to another MSA, the National (Requestor) MSA retrieves the locally available list of summaries of the e-AD/e-SAD(s) that match with the submitted criteria and therefore the MSA Official that initiated the respective query is informed accordingly.

Otherwise, the Initiator MSA that has already received a respective Common Request message from the National (Requestor) MSA determines whether the query indicated in the Common Request returns any results or not.

The aforementioned query might not return any results, either if no e-AD/e-SAD matches the search criteria or if the maximum limit of retrieved e-AD/e-SAD(s) has been reached or if the only e-AD/e-SAD that matches the query has been archived. In this case, the Initiator MSA builds a Refusal of Common Request message, stores it and sends it to the National (Requestor) MSA.

Otherwise, the Initiator MSA builds a List of e-AD/e-SAD message including a list of summaries of the e-AD/e-SAD(s) that match with the submitted criteria and after storing it, sends it to the National (Requestor) MSA.

The National (Requestor) MSA receives therefore either a Refusal of Common Request message or a List of e-AD/e-SAD message.

In the first case that a Refusal of Common Request is received, the National (Requestor) MSA performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively). Afterwards, the National (Requestor) MSA determines whether the Refusal of Common Request has been found valid or not. In the latter case, a refusal message has already been sent to the Initiator MSA for the receipt of an invalid Refusal of Common Request (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the Refusal of Common Request. Otherwise, the Refusal of Common Request has already been stored by the National (Requestor) MSA (in the context of process “L4-CORE-01-05”) and the MSA

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

Official, that initiated the respective query, is informed accordingly of the refusal of the query of an e-AD/e-SAD.

In the case that a List of e-AD/e-SAD is received, the National (Requestor) MSA performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03” and “L4-CORE-01-05” respectively). Afterwards, the MSA of Dispatch determines whether the List of e-AD/e-SAD has been found valid or not. In the latter case, a refusal message has already been sent to the Initiator MSA for the receipt of an invalid List of e-AD/e-SAD (in the context of process “L4-CORE-01-05”) and the process ends at this point without storing the List of e-AD/e-SAD message. Otherwise, the List of e-AD/e-SAD has already been stored by the National (Requestor) MSA (in the context of process “L4-CORE-01-05”) and the MSA Official, that initiated the respective query, is informed accordingly about the list of e-AD/e-SAD(s).

The process ends with:

a. The receipt of a refusal of the query of an e-AD/e-SAD by the Requesting MSA; the MSA Official that initiated the query is informed accordingly.

If too many e-AD/e-SAD(s) were found, the MSA Official may refine his search by restarting the query with complementary criteria; OR

b. The receipt of a list of e-AD/e-SAD(s) by the Requesting MSA i.e. a list of summaries of the e-AD/e-SADs that match with the submitted criteria; the MSA Official that initiated the query is informed accordingly.

From the retrieved list, the MSA Official selects the relevant e-AD/e-SAD to consult it locally (if it is available) or to download it through “L4-ACO-01-21-Download of an e-AD/e-SAD (Query)”.

The query returns a list of summaries of the e-ADs/e-SADs that match with the submitted criteria. From the retrieved list, the requesting MSA Official selects the relevant e-AD/e-SADs to consult it locally (if it is available) or to download it through L4-ACO-01-21.
Previous Objects	Acknowledge list of e-ADs/e-SADs

Table 5.435: Event List of e-ADs/e-SADs has been Received

## 5.18. Process L4-ACO-01-21-Download of an e-AD/e-SAD (Query)

### 5.18.1. Objective of Process

The purpose of this process is to describe the electronic flow for retrieving movement data relative to an e-AD/e-SAD.

The function remains available during the whole time window commonly agreed by the Member States, i.e. at least three years after the date of submission of the e-AD/e-SAD (See Article 21(1) of Regulation (EU) No 389/2012).

The process is triggered when an Official in a MSA decides to download all records concerning a given e-AD/e-SAD, in the case where this e-AD/e-SAD has not already been communicated to him/her or if there is a need for resynchronization. For this reason the MSA Official registers a specific query to its MSA application (Requesting MSA), providing the ARC of the searched e-AD/e-SAD.

After receiving the aforementioned movement download request, the Requesting MSA stores it and determines which MSA initially validated the e-AD/e-SAD (it is the MSA of which the Member State code

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

appears in characters 3 and 4 of the ARC). It might be the case that the Initiator MSA is the Requesting MSA itself. In that case, the same application plays both roles and the Requesting MSA will handle the request itself; thus no request will be submitted to another MSA.

If the Initiator MSA is in another Member State, then that MSA will be notified of the Movement Download Request by sending message IE784:C\_DOW\_SUB. After receiving the Movement Download Request, the Initiator MSA will perform its validation and handle the validation results. If the message is found valid, it will be stored by the Initiator MSA. If the message is found invalid, then a refusal message will be sent to the Requesting MSA. If this process ends with the successful receipt of the Movement Download Request, the continuation of the flow of the concerned query will take place at EMCS through the process “L4-ACO-01-22-Download of an e-AD/e-SAD (Results)”.

It shall be noted that there is no obligation for the Member States to store and archive messages that were rejected due to a syntactic error. However, when technically possible (e.g. valid IT structure and format), rejected messages might represent decisions of Member States Administration and should be stored and archived in the same way as valid messages. In particular, the information concerning movements of excise goods should be stored and archived for the same duration as valid messages. Rejected messages do not have to be automatically retrievable (i.e. they could be retrieved only via an ACO request).

### 5.18.2. Process Details

PROCESS ATTRIBUTE NAME	PROCESS ATTRIBUTE VALUE
Process ID	L4-ACO-01-21
Full Name	Download of an e-AD/e-SAD (Query)
Assumptions	<p>*The model includes references only to the messages' IDs (e.g. IE784, IE785 and IE838) and messages' names (e.g. “movement download request”, “movement download answer” and “history of a movement”) available in the Excise BPMs and artefacts.</p> <ul style="list-style-type: none"> <li>It shall be noted that there is no obligation for the Member States to store and archive messages that were rejected due to a syntactic error. However, when technically possible (e.g. valid IT structure and format), rejected messages might represent decisions of Member States Administration and should be stored and archived in the same way as valid messages. ## 5.19. Process L4-ACO-01-22-Download of an e-AD/e-SAD (Results)

### 5.19.1. Objective of Process

The purpose of this process is to describe the electronic flow for replying to a Movement Download Request. The process is triggered by Movement Download Request initiated by the Requesting MSA, as detailed in process “L4-ACO-01-21-Download of an e-AD/e-SAD (Query)”.

In the case when it has been identified that the Requesting MSA itself is the Initiator MSA, i.e. no request has been sent to another MSA, the Requesting MSA retrieves the locally available records concerning the given e-AD/e-SAD and the MSA Official that initiated the respective request is informed accordingly.

Otherwise, the Initiator MSA that has already received a respective Movement Download Request message from the Requesting MSA first sends a results message (IE785) with the following information

1. the ARC provided by the MSA official of the Requesting MSA application;
  2. the status:
    - \*indicating the state of the specific movement in the Initiator MSA application;
    - \*otherwise, when the specific ARC is unknown to the Requesting MSA application, it is set to "None";
  3. the last received message type:
    - \*indicating the number of the last message sent from the Requesting MSA application and received by the Initiator MSA application for the specific ARC;
    - \*otherwise, when the specific ARC is unknown to the Initiator MSA application or when the Initiator MSA application has not received a business message from the Requesting MSA application, it is set to "None";
- If a national movement related to the requested ARC exists, then the local state of this movement must be provided. The initiator MSA may also provide additional information on a voluntary basis.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

Additionally, if the e-AD/e-SAD was retrieved, the Initiator MSA application builds the history message of the movement (IE838:C\_HIS\_VAL) including the successive states of the e-AD/e-SAD as well as all attached reports of receipt, of control and of event. It sends the history message (IE838:C\_HIS\_VAL) back to the Requesting MSA.

In case any national movements exist related to the retrieved ARC, the initiator MSA can include the messages for national movements in the history message (IE838:C\_HIS\_VAL). The pre-condition is that these national messages should first be translated into the Common Domain messages type and format.

If no e-AD/e-SAD is retrieved no history message (IE838:C\_HIS\_VAL) is sent. This is an indication that the ARC is not known or that the e-AD/e-SAD is no more available on line.

This latter happens after the commonly agreed time window for consultation of movement data. Each Member State shall keep the information concerning movements of excise goods within the Union and the records contained in the national registers referred to in Article 19 of the Council Regulation (EC) No 389/2012, for at least five years from the end of the calendar year in which the movement began. That period may be limited to three years with respect to information entered into the national registers before 1 July 2012.

The Requesting MSA at its side, after handling the validation results of the Movement Download Answer message (IE785) received, examines the status that is indicated in it.

If the local state in the answer message (IE785) is 'None' the Requesting MSA expects no further response (history of the movement) from the Initiator MSA and this process ends at this point for the Requesting MSA.

Otherwise, the Requesting MSA expects the History of the Movement (IE838) from the Initiator MSA.

The Requesting MSA application receives, validates and registers the movement history (IE838:C\_HIS\_VAL) from the Initiator MSA. It forwards the movement history (IE838:C\_HIS\_VAL) to the MSA Official.

The process ends with the receipt of either the history of the movement or the information that the queried e-AD/e-SAD was not found online by the Requesting MSA. The MSA Official that initiated the respective request is informed accordingly.

## 5.22. Process L4-ACO-01-25-Movement Verification for Duty Paid Movements-Spontaneous information

### 5.22.1. Objective of Process

The purpose of this process is to describe the electronic flow for providing one-way information between two MSAs for movements of excise goods that is, duty paid B2C movements or undocumented movements (i.e. movements using a non-European Union standard document).

To that end, Article 3 of Regulation 389/2012 provides for one central liaison office per Member State, possibly supplemented by liaison departments with specific competences. The term ELO designates hereafter any of these authorities, each for its part of competence.

Upon any event, among which the outcome of risk assessment, the ELO of an issuing MSA may find it relevant to achieve investigations and/or actions concerning movements of excise goods that is, duty paid B2C movements or undocumented movements (i.e. movements using a non-European Union standard document), and to send the results to the ELO of one or several addressed MSAs..

The ELO of the issuing MSA summarises their findings concerning a movement (duty paid B2B movement, duty paid B2C movement or an undocumented movement), into a Movement Verification Results message (IE725:C\_MVS\_RES).

If relevant, they may attach supporting document(s) to the results message. After receiving the aforementioned findings, the Issuing MSA stores them and builds a Movement Verification Results message (taking into consideration the information/results registered by its ELO) which is stored locally and finally sent to the Addressed MSA.

The Addressed MSA receives the Movement Verification Results, performs the required validations and handles the results of these validations (for a detailed description of the respective processes, please refer to “L4-CORE-01-03 and “L4-CORE-01-05” respectively).

Afterwards, the Addressed MSA determines whether the Movement Verification Results message has been found valid or not.

In the latter case, a refusal message has already been sent to the Issuing MSA for the receipt of an invalid Administrative Cooperation Results message (in the context of process “L4-CORE-AS-IS-01-05”) and the process ends at this point without storing the Movement Verification Results.

In the former case, the Movement Verification Results has already been stored by the Addressed MSA (in the context of process “L4-CORE-01-05”) and the ELO of the Addressed MSA is informed about the information found and/or the results of the controls performed.

This process ends at this point and the ELO of the Addressed MSA is informed on anomalies, discrepancies or offences that might impact his Member State. Therefore he is free:

- to order further controls; and/or
- to communicate the information to the relevant persons; or
- to keep the information for later use; or
- to simply ignore the information if he judges it irrelevant for him.

The addressed MSA is informed on anomalies, discrepancies or offences concerning a duty paid B2C movement or an undocumented movement that might impact their Member State;

It is in a position to continue exchanges if they find it relevant; these further exchanges may be with or without support of EMCS.

It shall be noted that in this case, since the feedback mechanism is not applicable for spontaneous information cases, only the relevant details (Data Groups/Items) shall be present.

## 5.23. Process L4-ACO-01-26-Administrative Cooperation–Provide Feedback

### 5.23.1. Objective of Process

The purpose of this process is to describe the electronic flow for the provision of feedback on the results received by the Requested MSA for an Administrative cooperation request.

The process is triggered when the ELO of the Requesting MSA decides to register a results message containing the concrete follow up actions that have been taken by the Requesting MSA and information about how relevant the results were considered.

The Requested MSA receives the aforementioned feedback information and stores it.

## 5.24. Process L4-ACO-01-27-Movement Verification–Provide Feedback

### 5.24.1. Objective of Process

The purpose of this process is to describe the electronic flow for the provision of feedback on the results received by the Requested MSA for specific movements (i.e. duty paid B2B movements, duty paid B2C movements and/or any undocumented movements) or for the flow of goods between two traders. The process is triggered when the ELO of the Requesting MSA decides to register a result message containing the concrete follow up actions that have been taken by the Requesting MSA and information about how relevant the results were considered. The Requested MSA receives the aforementioned feedback information and stores it.

## 5.25. Process L4-ACO-01-30-Manual Closure of a Movement

### 5.25.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow of the Manual Closure of a movement of Excise Goods under suspension of Excise Duty (inside the territory of the European Union), in accordance with the current Common Specifications (FESS and DDNEA).

The process is triggered when:

- An Excise Officer at the MSA of Destination decides to request a manual closure of a movement; or
- An Excise Officer at the MSA of Dispatch initiates a manual closure.

In case the process is initiated by an Excise Officer at the MSA of Destination requesting a manual closure of a movement, the Excise Officer registers the manual closure request and builds the corresponding IE880:C\_MNC\_SUB message. Then, the created manual closure request message is sent to the MSA of Dispatch.

The MSA of Dispatch receives the manual closure request and proceeds with validating the data, by using the “Perform validation of Manual Closure Request” sub process. Then, the EMCS at MSA of Dispatch proceeds with the handling of the validation results by using the “Handle validation results of Manual Closure Request” call activity. Depending on the outcome (end event) of the “Handle validation results of Manual Closure Request” call activity, the following may happen:

- If a refusal message (IE917/IE704) is sent to the requestor (since the message was found invalid), the whole process ends at this point;
- If the Manual Closure request (IE880) is recorded (since the message was found valid), the process continues.

Then, the EMCS at MSA of Dispatch identifies whether the content of the Manual Closure request message indicates that the specific movement (i.e. indicated in the manual closure request message) can be manually closed. Based on this, it builds the Manual Closure response message (IE881:C\_MNC\_RES) and changes the state of the movement to ‘e-AD Manually Closed’. After this, the EMCS at MSA of Dispatch notifies the MSA of Destination and the Consignee about the Manual Closure of the movement by sending the IE881:C\_MNC\_RES message and the process ends.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

In case the process is initiated by an Excise Officer at the MSA of Dispatch, the Excise Officer registers the manual closure by building a IE881:C\_MNC\_RES message. The MSA of Dispatch builds the Manual Closure response message (IE881:C\_MNC\_RES) and changes the state of the movement to 'e-AD Manually Closed'. After this, the EMCS at MSA of Dispatch notifies the MSA of Destination and the Consignee about the Manual Closure of the movement by sending the IE881:C\_MNC\_RES message and the process ends.

### 5.25.2. Process Details

PROCESS ATTRIBUTE NAME	PROCESS ATTRIBUTE VALUE
Process ID	L4-ACO-01-30
Full Name	Manual Closure of a Movement
Assumptions	<ul style="list-style-type: none"> <li>As specified in FESS UC-306-110, in cases where the manual closure process is initiated by an Excise Officer at the MSA of Dispatch, then there is no obligation to submit a IE880:C_MNC_SUB message. In such cases, an Excise Officer at the MSA of Dispatch initiates a manual closure by registering a IE881:C_MNC_RES message.</li> </ul>

## 5.26. Process L4-ACO-01-10-Handle Timers associated with an Interrupted Movement

### 5.26.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for handling the timers associated with an Interrupted movement of excise goods under duty suspension arrangement (inside the territory of the European Union), in accordance with the current Common Specifications (FESS and DDNEA).

The current process is triggered when an Interruption of Movement is performed by the MSA of Dispatch (i.e. the MSA of Dispatch is the MSA of Interruption) or when an Interruption of Movement is received at the MSA of Dispatch (i.e. an Interruption of Movement is received over the Common Domain at the MSA of Dispatch from the MSA of Interruption) and the timers associated with the interrupted movement need to be handled.

For this purpose, the EMCS at MSA of Dispatch identifies if any timers associated with the interrupted movement are still running or have already expired.

In case there are timers associated with the interrupted movement which are still running, the EMCS at the MSA of Dispatch stops them. Unless there are timers associated with the interrupted movement which have already expired, the whole process ends here.

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

In case there are timers associated with the interrupted movement which have already expired, the EMCS at the MSA of Dispatch resets their flag that has been raised locally and the whole process ends at this point.

## 5.27. Process L4-ACO-01-28-Perform Download of an e-AD/e-SAD (Query-Results)

### 5.27.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for performing a download of an e-AD/e-SAD, in accordance with the current Common Specifications (FESS and DDNEA).

It shall be noted that the outcome of such queries may return data related to different types of movements (i.e. duty suspension or duty paid B2B).

The process is triggered when there is a decision to retrieve movement data relative to an e-AD/e-SAD. For this purpose, a query message (IE784:C\_DOW\_SUB) providing the ARC of the searched e-AD/e-SAD is submitted by using the “Download of an e-AD/e-SAD (Query)” sub-process (for a detailed description of the respective process please refer to “L4-ACO-01-21-Download of an e-AD/e-SAD (Query)”). Depending on the outcome (end event) of the “Download of an e-AD/e-SAD (Query)” sub-process, the following may happen:

- In case a refusal message (IE917/IE906) is received from the Initiator MSA (since the Movement Download Request was found invalid at the Initiator MSA), the whole process ends at this point;
- In case no refusal message (IE917/IE906) is received from the Initiator MSA (and Movement Download Request was sent successfully to the Initiator MSA), the process continues.

The response from the Initiator MSA to the Movement Download Request is received and handled by using the “Download of an e-AD/e-SAD (Results)” sub-process (for a detailed description of the respective process please refer to “L4-ACO-01-22-Download of an e-AD/e-SAD (Results)”). Depending on the outcome (end event) of the “Download of an e-AD/e-SAD (Results)” sub-process, the following may happen:

- In case a refusal message (IE917/IE906) is sent to the Initiator MSA (since the Movement Download Answer (IE785:C\_REQ\_RES) or the History of a Movement (IE838:C\_HIS\_VAL) that was received from the Initiator MSA was found invalid), the whole process ends here;
- In case the History of a Movement message (IE838:C\_HIS\_VAL) is stored (since it was found valid), the process also ends at this point;
- In case the Movement Download Answer (IE785:C\_REQ\_RES) indicating that the e-AD/e-SAD was not available (online) at the Initiator MSA is stored (since it was found valid), the whole process ends at this point.

## 5.28. Process L4-ACO-01-29-Perform General Query to retrieve an e-AD/e-SAD (Query-Results)

### 5.28.1. Objective of Process

The purpose of this process is to describe all possible paths in the electronic flow for performing a General query to retrieve an e-AD/e-SAD, in accordance with the current Common Specifications (FESS and DDNEA). It shall be noted that the outcome of such queries may return data related to different types of movements (i.e. duty suspension or duty paid B2B).

The process is triggered when there is a decision to retrieve an e-AD/e-SAD from the Initiator MSA. For this purpose, a Common Request (IE701) indicating a query for an e-AD/e-SAD is built and sent to the Initiator MSA by using the “General query to retrieve an e-AD/e-SAD (Query)” sub process (for a detailed description of the respective process please refer to “L4-ACO-01-19-General query to retrieve an e-AD/e-SAD (Query)”). Depending on the outcome (end event) of the “General query to retrieve an e-AD/e-SAD (Query)” sub process, the following may happen:

- In case a refusal message (IE917/IE906) is received from the Initiator MSA (since the Common Request was found invalid at the Initiator MSA), the whole process ends at this point;
- In case no refusal message (IE917/IE906) is received from the Initiator MSA (and the Common Request was sent successfully to the Initiator MSA), the process continues.

Following, the reply of the Initiator MSA (to the Common Request indicating a query for an e-AD/e-SAD) is received and handled by using the “General query to retrieve an e-AD/e-SAD (Results)” sub process (for a detailed description of the respective process please refer to “L4-ACO-01-20-General query to retrieve an e-AD/e-SAD (Results)”). Depending on the outcome (end event) of the “General query to retrieve an e-AD/e-SAD (Results)” sub process, the following may happen:

- In case a refusal message (IE917/IE906) is sent to the Initiator MSA (since the List of e-AD/e-SAD (IE821) or the Refusal of Common Request (IE702) that was received from the Initiator MSA was found invalid), the whole process ends here;
- In case a List of e-AD (IE821) is stored (since it was found valid), the whole process also ends at this point;
- In case a Refusal of Common Request IE702 (indicating that the query returned no results at the Initiator MSA) is stored (since it was found valid), the whole process ends at this point.

**Task Identify if timers associated with the manually closed movement are still running or have already expired**

TASK ATTRIBUTE NAME	TASK ATTRIBUTE VALUE
Task Name	Identify if timers associated with the manually closed movement are still

Excise Functional Requirements BPM Report for Administrative Cooperation
PROCESS MODELS

	running or have already expired
Task Type	Service task
Description	It is identified if any timers (i.e. TIM_EAD_ESAD, TIM_CHS and TIM_FDF) associated with the manually closed movement are still running or have already expired.
Actor	
Input Data	Timer TIM_EAD_ESAD Expiry Date TIM_FDF Expiry Date ARC TIM_CHS Expiry Date
Output Data	Result Identify if any timers associated with the manually closed movement are still running or have already expired
Previous Objects	Manual Closure of Movement performed/received at MSA of Dispatch and timers associated with the manually closed movement need to be handled

### Task Reset the flag of the timer

TASK ATTRIBUTE NAME	TASK ATTRIBUTE VALUE
Task Name	Reset the flag of the timer
Task Type	Service task
Description	Since the timer has already expired, the MSA of Dispatch resets the flag that has been raised locally (at expiration time).
Actor	
Input Data	ARC Result Identify if any timers associated with the interrupted movement are still running or have already expired
Output Data	TIM_CHS Reset Flag Date TIM_EAD_ESAD Reset Flag Date TIM_FDF Reset Flag Date

### Task Stop the timer

TASK ATTRIBUTE NAME	TASK ATTRIBUTE VALUE
Task Name	Stop the timer
Task Type	Service task
Description	Since the timer is still running, the MSA of Dispatch stops this timer.
Actor	
Input Data	Result Identify if any timers associated with the interrupted movement are still running or have already expired ARC
Output Data	TIM_CHS End Date TIM_FDF End Date TIM_CHS End Date
Previous Objects	Are any timers still running?
Information Exchange	
Requirements	ACO_FUR_0057
Data Set	
Events	
State
